

IDEA

The daily life ...

Tempus

Easier daily life...

It is very important with a vision aid that is easy to use for those who are visually impaired. Therefore we have made IDEA Tempus!

IDEA Tempus is easy to use and easy to place. A plug in the wall is all you need. In the development of IDEA Tempus the focus was on those which use their daily life in front of the system, and that much of the time is used to read and other activities which demands magnification. You can even take the IDEA Tempus with you to the cottage if you want to.

Thanks to a very low xy-reading plate it is even easier to work with. Another focus area is vision ergonomics and high picture quality. In addition the design is elegant. This is also obvious from the name Tempus which means – IN THE TIME!.

...makes each day easier

If you need magnification most of the time and are visually impaired this system can make your daily life easier. What used to be an invincible obstacle can suddenly become easy to handle and sometimes even easy. It isn't without reason that we are proud of IDEA Tempus. This system is unique because of its simplicity and user-friendliness. You have never seen anything like its distinct picture. Is this too good to be true? Let's present IDEA Tempus some more.

“Easy” to see with...

Vision ergonomics have been one of our major focus areas for many years. With the IDEA Tempus your view is directed downwards and you avoid getting tired in your eyes. We also have a new and revolutionary electronic in the system to improve the quality. This new technique gives an extreme high contrast and clear representation of text and picture. You can have a stable reading distance all the time with the IDEA Tempus. This gives you a good reading speed, endurance and understanding. The whole system is designed to give you an optimal working situation. The time flies by while you solve crosswords or are reading recipes. Piece off cake!

...”easy” to use

The most striking about IDEA Tempus is its simplicity. Our outstanding control panel consists of two knobs and a toggle switch in the middle to increase or decrease the magnification. The construction make it possible to fold and it take with you. Brilliant! A low reading board makes it comfortable to work with and its elegant design makes it easy to place in your home. Can it get better?

Facts

IDEA Tempus is an aid for visually impaired designed for daily use. The system is connected with a plug to the wall and has a simple, easily recognizable control panel. It is easy to unpack and to use. The size of the reading plate is like A3. The reading plate can also be locked in y direction or in both directions, which is convenient under transport or while writing.

During the development of IDEA Tempus we focused on both vision ergonomics and user-friendliness. We feel that we have succeeded with both. Even better sight with new and revolutionary electronic VIC (Vision Improvement Card).

Technical facts

Magnification at 17" monitor:	1,3 – 90x
Zoom:	18x optical 4x digital
Focusarea:	70 mm
Screen updating:	60Hz
Resolution:	XGA 1024x768
Artificial colors:	Yes
Reference line:	Yes
High contrast:	Yes
Lighting:	20W 12V Halogen
Power consume:	Less then 100W
Voltage:	110-240VAC
Weight:	Gross 24 kilo. Net 20 kilo
